

Due April 5th

You have been given a two acre plot of land. With this land you are to plan out how 24 houses should be arranged to develop a housing community. Within this area you should also include a community center or club house that is large enough to house a small laundry facility, a full sized kitchen, a gathering space for residents, and a small store. All items should be drawn to scale. A legend should be included that identifies the scale and how items are labeled. The community will be connected to city water, sewer, and electricity, but you will need to show connection locations based off what is required by the City of Savannah. These connections should be color coded and be identified in the legend. Since this community is for families, a playground or outside area needs to also be identified. You should also provide a small parking area for any families that may have a car. You will complete your layout on a poster, but will need to record your group presenting and explaining the components. This video will be what is uploaded into your website, along with a picture of your poster.

Legend	
___/5	Scale is provided
___/5	Utilities are color coded (water: blue; electricity: yellow; sewer: red)
___/5	Any symbols used are identified (ex: red circle=fire hydrant)
House Layout	
___/5	Road system is in place that allows access to all houses
___/5	Houses are equally spaced out
___/5	Houses are all equal size and to scale
Community Space	
___/5	Community building drawn to scale large enough for required components
___/5	Outdoor space indicated
___/5	Parking lot
Presentation	
___/5	Poster is neat legible
___/5	Video presentation submitted with explanation
___/5	Clear photo submitted
___/60	TOTAL
